

TASSOMAI GCSE Survival Guide

Practical advice for parents

Welcome to Tassomai's GCSE Survival Guide

GCSEs can be a very challenging time for parents, particularly when your first child is going through them and you're both unsure of what to expect. This guide has been put together by the team at [Tassomai](#) with the help of subject specialists, education experts and mental health campaigners to try to break down what parents need to know about the next 2-3 years of their child's education. Our contributors have given us their top tips on everything from relaxation strategies to revision techniques in the hope that they can put your minds at ease.

The biggest issue that students face in the current system is getting all of the content covered in time, both in class and then again in their revision time. Technically, GCSEs only last for 2 years but a lot of schools are adjusting this so that the courses span nearly 3 or even 5 years to make sure everything is covered sufficiently.

The most significant change that will have taken place since parents sat their own exams, is that all coursework has now been replaced with terminal exams at the end of year 11. Coursework used to be included in final grades, which took some of the pressure off the year 11 assessments, but now these end of year exams are tougher on students than ever before. Although this can sound daunting, there's a lot you and your child can do to make this process easier on you both.

After 2 years of disrupted learning, some students may have never sat an exam before, which could lead to them being even more stressed than usual for their GCSEs. Looking after your child's wellbeing and breaking down any concerns they have about assessments is key to their success in their GCSEs and beyond.

We hope the following pages can equip you with the knowledge and confidence you need to help your child not only survive but thrive during their GCSE years.

How to Support your Child's Wellbeing & Mental Health

How Can Parents Support Their Children's Mental Health and Wellbeing Throughout GCSEs?

The GCSE years are some of the most difficult and frustrating that young people go through. Academic success can easily become the centre of attention during this period, even when there is so much else going on, but it is crucial that this pressure isn't allowed to overshadow your child's physical and emotional wellbeing.

It's time we broke down some of the myths surrounding GCSEs and that starts with thinking about the stress that is often associated with the assessments. It can be easy to forget that these exams are probably one of your child's first encounters with this kind of stress. People who are already struggling with any other aspect of their life, be that with their family, friends, with illness or financial worries, find the struggle even harder.

Understandably, this must be a very scary time for parents not knowing how best they can help. Keeping a level head and reasonable expectations as a parent during this time is much more likely to have a better impact on your child than pushing as hard as you can for top grades. All parents want their children to succeed - it's all just about keeping a healthy balance.

We have spoken to psychotherapy experts and mental health campaigners to put together their top tips on how parents can best support their children's mental wellbeing throughout their GCSEs, some are good reminders of age-old sayings and others bring a fresh perspective, either way we hope they help your family to conquer GCSEs with confidence and understanding.

What's Really Happening When We Are Stressed?

The best way to minimise stress and anxiety for students is to understand what it is and how we can combat it. Everyone has experienced some form of stress in their lives, but how often do we stop to analyse its symptoms and its effect on the body? Understanding and being prepared for the physical and emotional signs of stress can stop students from getting overwhelmed in new situations. It really does all come down to a bit of basic biology...

“Many students show physical signs of stress right before assessments as their fight or flight response kicks in with their adrenaline - their hands might shake, their heart might be beating faster. By understanding what is happening biologically, you are better equipped to take yourself through some logistical steps or techniques to regain control and be able to focus in the assessment. Learning breathing exercises, meditating and practicing yoga can all help to calm these nerves and there are loads of YouTube videos students can watch and learn from.” – Karen Collins, Lead Science Associate for [PiXL](#)

Neurological development of young adults

Teenagers are going through monumental changes in most aspects of their lives during the time when they're also expected to sit their GCSEs. With this in mind, knowing what is physically changing in your child's brain can be really illuminating for parents.

“Important changes are taking place during the teenage years. Hormonal changes and changes in different parts of the brain are prompting complete transformations in their lives before academic, family or social pressures even get a look-in. These changes are taking place in the limbic system, which is responsible for seeking pleasure and rewards, emotional responses and sleep, as well as in the prefrontal cortex, which is responsible for decision making, organising, planning and controlling impulses. Knowing and recognising that these changes are going on makes you realise just how much neurological development is happening during these years and how unsettled teenage life really is.” – Madeleine Inkin, psychotherapist and co-founder of Tassomai

Parental Expectations

Parental expectations can be a double-edged sword: you want to motivate them and help them succeed, but you may end up doing the opposite if you don't strike the right balance. Students are bombarded with information about assessments and revision throughout their time at school and it is easy to go along with this rhetoric without thinking about what is actually achievable and specific to your child's abilities.

That isn't to say that you can't encourage them to aim for higher grades, but keeping a healthy perspective on what they as an individual are academically capable of ensures that they will strive to perform to the best of their ability, rather than an arbitrary standard.

Here's what some of our specialists have to say about keeping a level approach:

“Parents have a tricky balancing act to perform, as over involvement can lead to additional pressure for students and sometimes unrealistic expectations, and under involvement can lead to students switching off and not performing as well as they could. As a parent you would aim for that goldilocks position where parents are encouraging, interested and supportive.” – Wendy Finan, Senior Secondary Mathematics Teaching and Learning Consultant

“When parental expectations are not met and parents feel disappointed, developing children and teenagers will internalise a sense of themselves as being a disappointment, which will nurture low self-esteem and shame. When what is expected of them by the parent isn't within their ability, parental disappointment can be devastating. Be child led and be honest about their unique interests, talents, and temperament. Place your child at the centre of your parental observation and concern - this will inform you of any necessary parental expectations.” – Madeleine Inkin, psychotherapist and co-founder of Tassomai

Practical Tips to Support Your Child

Do

- **Start the conversation!** Ask them questions about how they're feeling. If they're not comfortable sharing, try opening up about any struggles you've faced in the past. Vulnerability is contagious!
- Encourage them to **exercise and get some fresh air** each day, a change in surrounding can do wonders for shifting a negative mindset.
- **Act early!** If you think they are struggling, don't sweep it under the rug. Even if you're not sure of the best way to help, it's always better to address any underlying issues or unhappiness as soon as it arises.
- **Educate yourself** on mental health and the best ways to support your child if they are struggling. [Young Minds](#) has great resources for parents and carers who want to feel a bit more informed.
- Work with your child to try and set up a sustainable routine around GCSE preparation, even if it's initially 15 minutes each day. The confidence-building power of daily routine is transformative and can **prevent performance stress** before it starts.

Don't

- Stop them from seeing friends during revision time, it's good to break up the work with healthy social situations and **everyone needs some downtime**.
- **Bottle up your concerns!** Talk to your child if you're worried about their stress levels and see what you can do to help - it might be simpler than you think.
- **Try to take everything on yourself** - it's really important to remind yourself that you are not a professional and there may come a time when your child needs more than just your personal support. This is very hard, especially for parents, as our natural instinct is always to try and 'rescue' someone we care about from situations that are hurting them, but we can't do everything ourselves, nor are we qualified to.
- **Allow stress to become sickness.** Intervene before your child has a chance to get overwhelmed - it's all too easy for everyday stress over GCSEs to tip into something more serious, so don't let a fixable situation get worse than it needs to.
- Let your child mistake a single test score for a **final assessment of their potential**. Instead encourage them to focus on how their work is developing, what they want to improve next, and on the positive incremental changes over time.

Building Resilience

GCSEs require students to have a level of mental resilience against the stresses and strains they are bombarded with, but they are rarely taught how they can develop these skills. Learning to pick yourself back up again after a failure doesn't always come naturally - it's its own kind of art form and requires practice just like everything else, without it students are much more likely to burnout and get overwhelmed.

“When I look back at my preparation for GCSEs, I remember being much happier to pretend that I knew the answer rather than admitting that I was struggling. I never had the courage to ask for help because I was worried about being a failure and the judgements that would follow. Encouraging children to identify their weaknesses and then ask for help is one of the golden rules for resilience. This skill will not only improve results but will be a key cog in resilience building for the future.”

“One of the dangers is that children become so focused on their exams that they don't think about anything else. This leads to fatigue, stress and actions that lack resilience. Encouraging children to take time away from revision helps to get them out of the exam bubble and provides a balance that will inspire a more resilient approach to their learning. The emphasis on good food, exercise and sleep will further enhance this resilient mindset.” – Sam Clark, teacher and author of 'What They Don't Teach You in School'

Read more about Sam Clark's top tips for building resilience on the [Tassomai blog](#).

Positive Mental Attitude

Mastering this kind of academic resilience will help students identify when they are getting overwhelmed, a skill which can easily be transferred into other aspects of their lives:

“Getting stuck is a good thing! Some of the best learning you can do is learning from your mistakes. This process helps improve self-analysis and to build confidence over time through self-checking.” – Kit Bett-Masters, Director of Learning Science and YouTuber at [Gorilla Physics](#)

“It’s really important that parents reinforce the idea of keeping going and building resilience in their work, so that students learn to carry on even when they’re finding something tricky. Working hard will always lead to progress, it’s not always about getting the top grades.” – Wendy Finan, Senior Secondary Mathematics Teaching and Learning Consultant

“The best piece of advice I can give parents and students alike is to remember that you can only do the best you can and not to overthink. I’m so pleased that students have such amazing role models like Simone Biles to look up to these days. It is reassuring for students to know that stress gets to everyone and it doesn’t undermine your strength - it’s perfectly natural to ask for a break when you need one.” – Karen Collins, Lead Science Associate for PiXL

Is Your Child Suffering from Exam Stress? How to spot the Signs

Students preparing for exams often display very similar characteristics and it is good for parents to be aware of a few classic archetypes of exam-stressed children. Be sure to look out for the signs!

The Ostrich

The ostrich is that student who, at the mere mention of their exams - or their revision - buries their head in the sand. They could be quite obvious in this behaviour - "I don't want to talk about it" - or it might be subtler, finding an excuse to get out of the room and avoid the topic. Waste no time in confronting this behaviour and making a plan together, because the very act of avoidance means that the revision work will pile up and the stress will increase.

The Porcupine

Similar to the ostrich in many respects, but rather than avoid the conversation, the porcupine might become rather spikey and start shaking their quills. The reasons are quite similar, and the approach, likewise requires calm, careful conversation and a structured plan to work together to remove the fear of the exams.

The Meerkat

You might think you've been fortunate if your child is the Meerkat: super busy, extremely diligent, revising late and requesting extra practice papers from the teacher. But this behaviour may indicate a lack of confidence and a tendency to worry. Talk to your child to make sure they're keeping things in perspective and limit the revision schedule in order to allow time for R&R.

The Lion

A tendency of higher-achievers - the Lion is that child who seems to have it all under control, but spending an inordinate amount of time lying around. If they're behaving as though the exams present no problems - to the point perhaps of arrogance or laziness - then it's time for a conversation. Are they hiding any anxiety and feeling like they can't ask for help, or don't know how to?

The Bower Bird

A classic behaviour, not unlike the Meerkat. The Bower Bird (who spends large parts of its life decorating its nest) lends its name nicely to the type of student who keeps themselves terribly busy focusing on superficial tasks like colouring in notes or organising files and revision plans. If you are the parent of a Bower Bird, then talk to them, constructively, about their aims for each revision session, and check in with them regularly to see how much they have achieved.

Mental Health Resources

[SHOUT85258](#)

SHOUT85258 is a text message based organisation that gives young people an accessible way of asking for help. Think of it as the texting version of the Samaritans. Even if your child isn't currently struggling, suggesting they save the number to their contacts will let them know that you're thinking of them, without smothering them.

[Samaritans](#)

Samaritans is a registered charity aimed at providing emotional support to anyone in emotional distress, struggling to cope, or at risk of suicide throughout Great Britain and Ireland, predominantly through their telephone helpline, which is available 24/7 for those who need it.

[Papyrus UK](#)

Papyrus UK is a mental health charity specialising in supporting young people and they have great advice for parents and carers, both on their website and if you contact them. The resources on their site are fantastic. If you are unsure where to start, head to their website.

[Young Minds](#)

Young Minds is the UK's leading charity fighting for children and young people's mental health. As an organisation, they are fighting for a world where no young person feels alone with their mental health. They have a parents helpline and large bank of resources for parents who are unsure of how to best support their child's mental health.

[Switchboard](#)

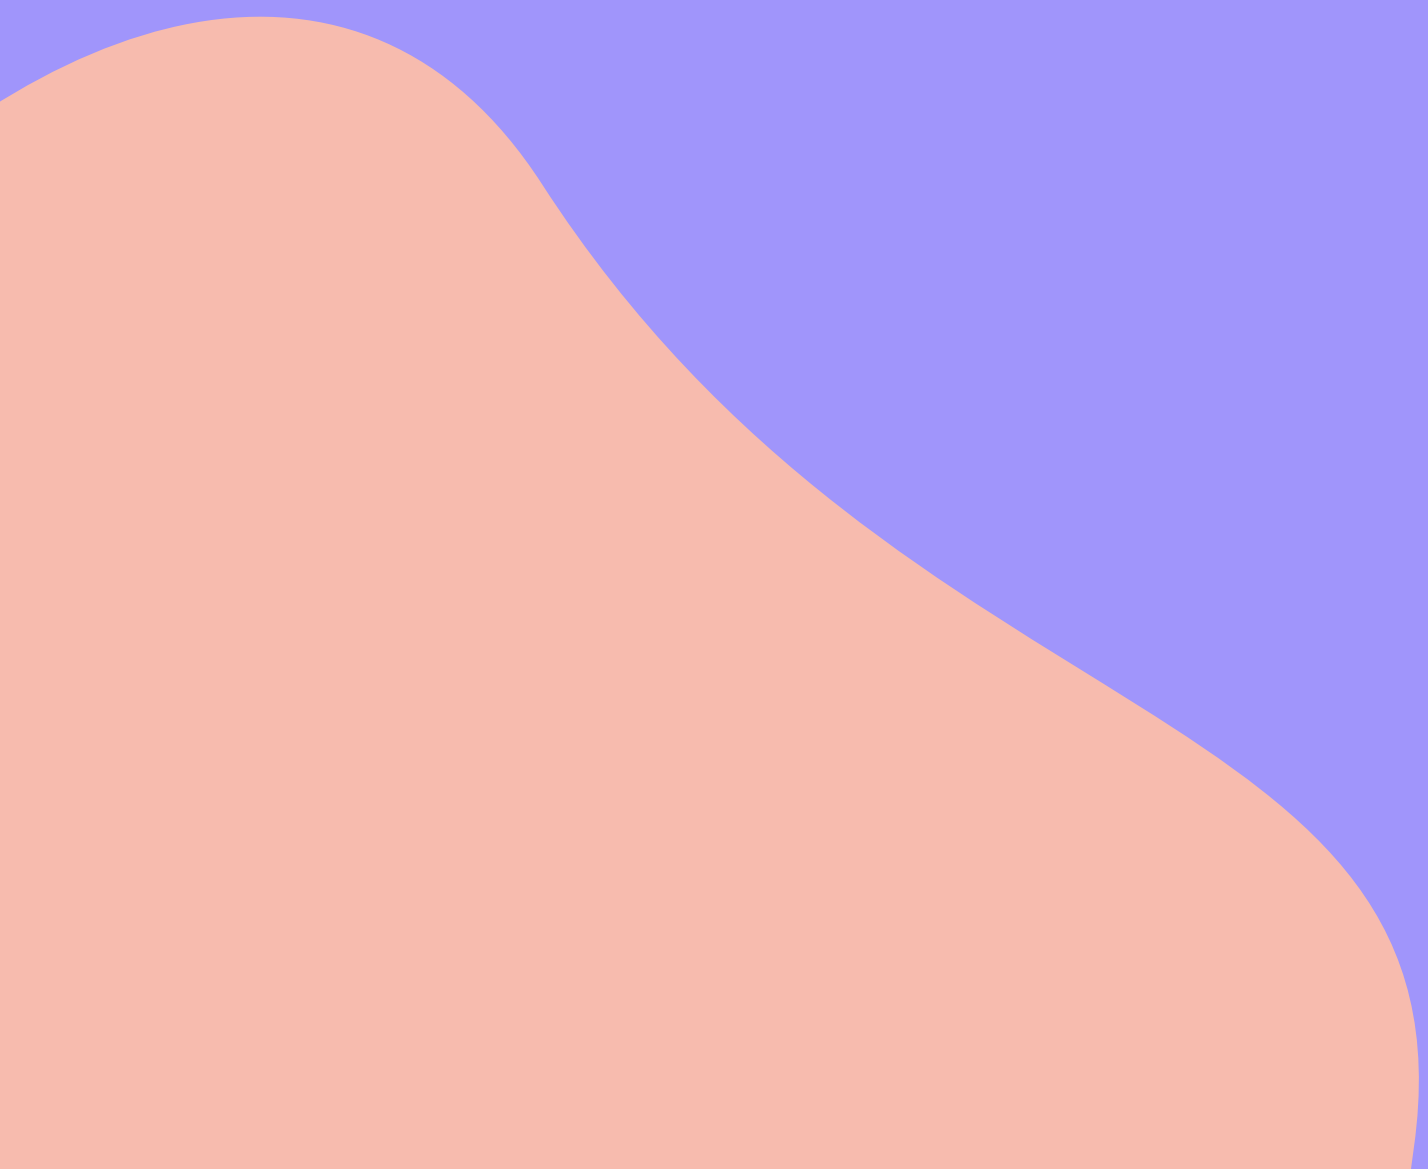

Switchboard is a hotline, instant message and email service run by volunteers who all identify as LGBT+. They offer a safe space for anyone to discuss sexuality, gender identity, sexual health and emotional well-being.

“People don’t compare mental health to their physical health enough - if you were concerned for your child’s physical health you would be straight down to your GP asking for a check up and making sure everything was ok. You wouldn’t leave an infection to ‘clear up by itself’, you would act, and the same has to go for mental health. Act early if you notice someone struggling.” – Ben West, mental health campaigner

Read Ben West’s top tips for supporting your child’s mental health during GCSEs on the [Tassomai blog](#).

Tackling the Core GCSE Subjects

A large, abstract, orange-colored shape with rounded edges, resembling a stylized wave or a large letter 'C', positioned in the lower half of the page. It is set against a solid blue background.

GCSE English: What to Expect

All of our English specialists agree that students are often unsure about how to revise for their English assessments. Coursework is no longer part of the English GCSEs, so the pressure on students to do well in the exam can make revising feel overwhelming - especially if it's all done at the last minute!

With multiple texts to study and memorise quotes for, it's not hard to see why students may feel intimidated by the task ahead of them. English expert Andy Sammons advises students to *“break subjects down into their component parts as this makes them much more approachable, even if it's a subject that your child doesn't personally like. It's all about identifying what you need to know.”*

So What do You “Need to Know”?

The Syllabus

A good starting point for both parents and students is to get to know the syllabus of the exam board they are studying. This information is easily available online and it's a good guide for knowing where they will pick up marks on each paper.

The Content

They will be sitting two separate papers as part of their English GCSE: one in language and one in literature, both will require students to read and analyse extracts of text, so this is something you can help them to practise at home. The English literature exams will cover: a Shakespeare play, a 19th century text, a modern text, an anthology of poetry and a piece of unseen poetry. Parents can help with quizzing their children on the plot, characters, themes and settings of these texts, as well as asking them to explain why certain techniques are used (this will help them to pick up extra marks).

The Dates

It's a good idea to make note of any assessment dates in line with your timetable too, to make sure they don't sneak up on you. Abi Ludlow, English teacher and Head of KS3, encourages parents to *“work backwards from the exams and plan when revision needs to take place - this way they are more likely to achieve a good work-life balance and not feel overwhelmed by the task ahead of them.”*

GCSE English: Supporting Your Child

For both English literature and language, our English specialists all recognise that it is important for students to read as much as possible. Reading and analysing both nonfiction and fiction texts is essential practice for the exams and something that can easily be done at home with parents.

Kathrine Mortimore, English teacher at Torquay Academy, advises that revising for the GCSE English literature exam is ***“not all about memorising quotations - it’s also about knowing how to use these quotes to illustrate a point.”*** She also emphasises the importance of contextualising students’ knowledge, to build ***“that background knowledge of the genres that we know they’re going to need at GCSE.”*** This is essential for showing a wider and more sophisticated understanding of the texts in an exam, which is key to obtaining a good mark.

As well as typical revision practices such as flashcards and past papers, when it comes to revising for the exam, Abi Ludlow also recommends doing a ***“30 minute writing challenge: give your child a Unit 2 task and starting a 30 minute timer. Aim for a detailed plan and at least one side of writing!”*** Parents can help their children to revise for English by mixing up these more formal practices with short quizzes and engaging conversations about what they’re studying.

For Andy Sammons ***“it’s all about getting match ready”*** when it comes to GCSE exams. ***“If they know the content of the texts they’ve studied and they know the structure of the papers inside out, then they’re perfectly set up for being able to apply the knowledge of the former to the latter - it’s all about getting a good understanding of both textual and procedural knowledge.”*** The exams all follow the same pattern, so memorising where marks are available on each paper and what question style is likely to come up will help your child feel as prepared as possible.

GCSE Science: What to Expect

Like other GCSEs, Science has changed over the past few years to exclude coursework, which means everything is saved for the end of year exams and there is a lot of content to cover. Year 9 acts as a foundation year where students get a good grip of the core concepts that will be the building blocks for their learning over the next two years.

Kit Betts-Masters, science teacher and YouTuber behind '[Gorilla Physics](#)', recommends that parents get to know what their child is studying and when: ***“every school now legally has to post its curriculum on its website with a year by year, term by term breakdown of what is being covered and when. Ofsted are checking that this information is displayed so it should definitely be available and is a great way for parents to stay informed and up to date.”*** Being able to talk to your child about where they are in their GCSE science journey can help you to keep them engaged in their studies. This can also help you to catch any early warning signs that they are struggling.

All of our Science experts agree that there is a lot of content to cover, which can be daunting, but the best thing to do in this situation is to plan ahead to avoid last minute cramming. A good idea is to take note of when mock assessments are and spread the workload out as much as possible to avoid crunch points. It doesn't have to be intense from the very beginning, but it does help to get the ball rolling early.

Another important thing to consider with GCSE Science is how you can help to build your child's confidence in their abilities. Kit says that ***“for me, the biggest challenge in science education is convincing people that it's okay to not understand every single thing.”*** It's easy to feel overwhelmed by the subject at first and this is why it can help to remind your child what they actually enjoy about the subject, even when they are struggling.

Read more learning and revision tips from Kit on the [Tassomai blog](#).

GCSE Science: Supporting Your Child

Many other parents don't feel like they have the scientific knowledge to help their children with their science revision, and it can seem difficult to support them when your child's level has surpassed your own. You can always brush up on sites like [BBC Bitesize](#) if you want to keep up with them or find quizzes online that you can test them on.

Karen Collins explains that ***“for all three sciences, there are basic facts and premises the students need to learn but the real challenge comes in the exams when they have to apply this knowledge to questions. There's one classic example where students had learnt about an experiment testing how different sugar solutions affect osmosis on slices of potato, and when students were instead asked about carrots in an exam they had no idea what to say.”***

It's therefore important to ensure your child understands the content they are studying and isn't just regurgitating memorised facts. This is where using past papers can be useful as they help to test students' application of their knowledge and solve problems.

Matt Green, ***'The Rapping Science Teacher'*** on [TikTok](#), says that topics often overlap in GCSE science and “there are always students who struggle with some elements of physics and it is often because their confidence is also low in maths.

“Being able to recognise overlapping areas where students are struggling can help to pinpoint where extra revision is needed.” Matt continues, ***“The best way to build confidence is to start with the topics that you find hard to understand. It can be a really great motivator for a student to feel like they've mastered a topic that they have been told is the 'most difficult one on the course', because from that point on everything gets easier and slots into place.”***

Kit Betts-Masters encourages parents to ***“ban phrases like 'science isn't for me' or 'I don't get it' because that doesn't help anyone. Science is definitely seen as a trickier subject but I think it is also one of the most interesting and there's a route into it for every student.”*** Science is all about asking questions: not necessarily knowing the answers, but seeking answers. So if you as a parent don't feel confident in your own science knowledge, don't let that stop you from helping your child to learn and practise.

GCSE Maths: What to Expect

As GCSE maths is an important subject for routes into further education, less confident students may need extra support to ensure that this progression takes place.

We spoke to Maths expert Wendy Finan, who advises that ***“progression routes for higher and further education should be investigated but unless a student is wanting to progress to maths, science or engineering qualifications a grade 4/5 is usually sufficient.”*** So although parents may worry about what tier (foundation or higher) or what grade their child is able to obtain, there are always options that will allow for your child to progress. Wendy also told us that ***“in 2019 almost 60% of UK students were being entered at foundation level”*** and do very well with this level of paper instead of struggling and having their confidence knocked by the higher.

Like our other GCSE specialists, Wendy supports getting started early when it comes to revision: ***“the key to doing well in mocks and exams alike is consistency. By remaining consistent and being strong in the basics, they are much more likely to succeed both academically and emotionally.”***

Wendy also says that ***“the key thing to getting the most out of GCSE maths is laying strong foundations - the basic core topics include number properties and calculation, ratio, fractions, decimals, percentages, and using negative numbers. If your child doesn't have a solid understanding of these ideas, then piling on the harder topics is simply not going to work.”*** Therefore, when it comes to revising GCSE maths, sometimes it can be useful to pinpoint topics where your child is struggling and then return to revising the basics related to that area to fix any gaps in basic knowledge.

“Just like a Jenga tower, maths needs a solid foundation, otherwise everything laid on top will come crumbling down.”

GCSE Maths: Supporting Your Child

It's all too common for students, and parents for that matter, to say that they are 'bad at maths', however, Wendy Finan says that *"maths is largely about the mental attitude you have towards it."* Encouraging your child to have a positive approach to their maths work rather than dismissing the subject as soon as they start to struggle is key in helping them build their confidence in the subject.

When it comes to revising, it's important to remember that *"the new national curriculum has a huge emphasis on problem solving, meaning students need to understand how to apply maths like Pythagoras' theorem to situations and problems, rather than just grasping it as a concept,"* says our maths expert. To help students develop their problem solving skills, Wendy recommends puzzles such as Sudoku as a fun way to keep students engaged in their maths revision.

Another way to help your child test their GCSE maths knowledge is to get them to teach you what they have learnt. This means you don't need to be an expert in the subject to help them develop their Maths skills - it's just keeping them engaged that's key!

It's all about finding the right balance between offering positive encouragement and reassurance without putting too much pressure and unrealistic expectations on your child. Finding out your child's performance in school tests and mock exams, as well as quizzes and past papers you do with them at home, can help you to set realistic expectations and understand the best way to support them.

"I would encourage all parents to keep communication channels open between school, student, and parent," says Wendy. By keeping yourself up to date and engaged with your child's learning you can help them feel supported and confident during their GCSE exams. Remember that there are a range of factors that contribute to your child's GCSE outcomes. It's good to try to avoid feeling overly responsible for their success in this respect - and to remember to reach out to their school if you feel your child needs extra support!

Our Experts' Top Revision Tips

The Science of Learning

With a multitude of resources to aid studying available on the internet, it can be hard to know where to start. Our Science expert Kit Betts-Masters has shared some research with us on the science of learning, and how students can use this research to optimise their time spent studying.

Kit says that *“the evidence suggests that students prefer making notes and highlighting texts as their main method of revision - but the evidence also shows that this is the least effective way to revise!”* Instead of staring at revision notes, which don't engage students' brains on an intensive level, Kit recommends revision that is more linked to retrieval practice.

Retrieval practice works because *“every single time you try to retrieve a fact, even if you don't get it right the first time, you code that bit of information deeper and deeper into your long term memory.”* This is of course an important practice for the exam - we all know how hard it can be to remember facts under pressure.

10 minutes of intensive quizzing > staring at a notebook for an hour

As time during the GCSEs is precious, it's important to use it effectively. *“Actively engaging students in self-testing helps them understand where the gaps in their knowledge are and it enables them to witness where they are improving and building confidence.”*

It is also recommended that, despite it seeming the more obvious approach, students should avoid revising one topic at a time when it comes to studying for their exams. Kit recommends that *“they should interleave the topics, doing less of each but more often, repeatedly revisiting them and building up a knowledge.”* This is where “spaced repetition” can come in handy - the idea that if you *“practise something, leave it for a bit and then practise it again”* you will be able to build on your understanding and knowledge retrieval. It's all about building from the foundational content up, rather than each topic at a time.

You can read more about the science of learning on the [Tassomai website](#).

Where to Start with GCSE Revision?

GCSEs are often the first formal exams that students will sit. Never having revised for exams before can leave students (and parents!) feeling overwhelmed by the task ahead of them, meaning a little guidance in where to start can be useful.

As Murray Morrison, learning expert and Tassomai founder, puts it *“the normal feeling for a parent of a GCSE student at this stage is a rising sense of dread, dogged by conflicting questions like ‘How can I help? How can I stay out of their way?’ or ‘How can I make them start to take this seriously? How can I avoid making them stressed?’”*

Our top tips for finding the answers to these questions are:

1. Get into a routine!

Abi Ludlow, one of our English experts, suggests *“getting to know your child’s assessment timetable and putting dates in the family calendar or on the fridge. This shouldn’t be used as a way of creating more stress for them, but should act as a way of letting everyone else in the house know when the crunch times are and when that child might be in need of some extra support or quiet time.”*

2. Make a plan!

Some students are better at planning their revision than others, so make sure that your child is on top of basic revision organisation, like timetables, to ensure they keep track of where they are. Outlining the material of their course and colour coding it in response to how they are finding it (e.g. green for confident areas) can help them to understand what they may need to focus on next.

3. Communicate!

Help your child to feel supported by reminding them about what they have to do without being overbearing. It is key that your child learns to take responsibility for their own learning during this time, but working with your child as a team will help them to achieve success.

Practical Revision Tips: Help Your Child to Get the Most Out of Their Revision

- 1.** Encourage them to take a **“little and often”** approach to studying. Studies have shown that students learn a lot more when they work for concentrated, short bursts every day, rather than cramming on one day for hours at a time.
- 2. Read up on different learning strategies.** Implementing proven techniques such as **“interleaving”** can help your child to optimise their time spent revising. Interleaving focuses on improving knowledge retention, through switching between topics and returning to them at later dates. By revisiting topics more often, students will become more regularly exposed to concepts and will be able to build upon their knowledge of them more easily.
- 3.** Help your child to **research online resources**. As online learning has become more common, various websites have offered up online learning tools to help students make the most of their time at a computer or on their phone. Be sure to **download past papers**, mark schemes and subject specifications from exam board websites so that everything stays relevant to assessments.
- 4.** Introduce your child to **different revision techniques**. The **“Pomodoro”** technique was developed in the late 1980s, and is shown to be an extremely effective way to work. It helps to break up stretches of work into manageable chunks, by studying to a 25 minute timer with a 5 minute break in between each round. This can help your child to focus and to do more worthwhile revision.
- 5.** Encourage your child to keep **healthy revision habits**. Different students react to revision stress in different ways, so it’s important to keep an eye on how your child is feeling. If your child is overworking themselves, it may be time to step in and get them to take an hour or two off - this time to rest can be just as important as the revision itself.

Revising for GCSEs: Using Past Papers Effectively

Most teachers will agree that doing as many GCSE past papers as possible and going over each subject's specification before the exam will be beneficial. Victoria, a parent from Berkshire, told us that *“doing just one or two past papers alongside my child and then showing him the marking scheme and how to improve his score was transformational. He learnt how to get even higher scores, then he applied the skill to all his other subjects without my involvement.”*

Feedback Loops

Past papers can be a great way to identify your child's weaknesses, especially in the first few that they do. When your child first starts doing them, it's a good idea to have them complete each question and then check it against the mark scheme straight away. Checking the answers immediately shortens the 'feedback loop' - feedback is crucial to learning and its value is far greater if applied instantly, so check their answers against the mark scheme right away, not 2 hours or 2 days later!

One science teacher told us that *“students who are successful know how to answer the questions to maximise their marks; exam technique can change a grade! The understanding of the command words in every subject is important.”* Becoming familiar with the command words, such as “explain” and “describe”, that are used in past papers helps to limit the chance of them misunderstanding the question. This can also help to make students feel at ease when it comes to taking the exam, as they will understand instantly what is being asked of them.

Insight Reports

Pay close attention to the Examiners' Comments - these can be found for every past paper online, often in an “Insight Report”. These will tell you where most students lost their marks, so you can see where your child may have made a similar misunderstanding to other students.

It is also important to remember that if your child isn't sure about how well one of their answers would have done in an exam, or if they want advice on how to improve it, their teachers are always there to help. How well their students do in their exams is important to them as well, so it's in their interests to help!

Top Tips & Insider Knowledge

Did you know that rosemary could boost your memory?

Research from [Northumbria University](#) suggested that pupils working in a room scented with rosemary essential oil, achieved 5% to 7% better results in memory tests. This might not work for everyone but could be worth a try during your child's next revision session... you never know!

Tips from parents:

“Early on, help your son or daughter find a revision method that suits them. Encourage them to try out different approaches.” – Victoria, Berkshire

“Create a future board, why are they working to get these results? Place the future board in front of where they revise so they can see their goals every day to remind them why they are doing this.” – Sharon, Reading

“Take every exam seriously! My son's classmates said mock exams didn't matter and they didn't revise. Then in lockdown exams were cancelled and mock results were used to decide on final grades.” – GCSE parent, London

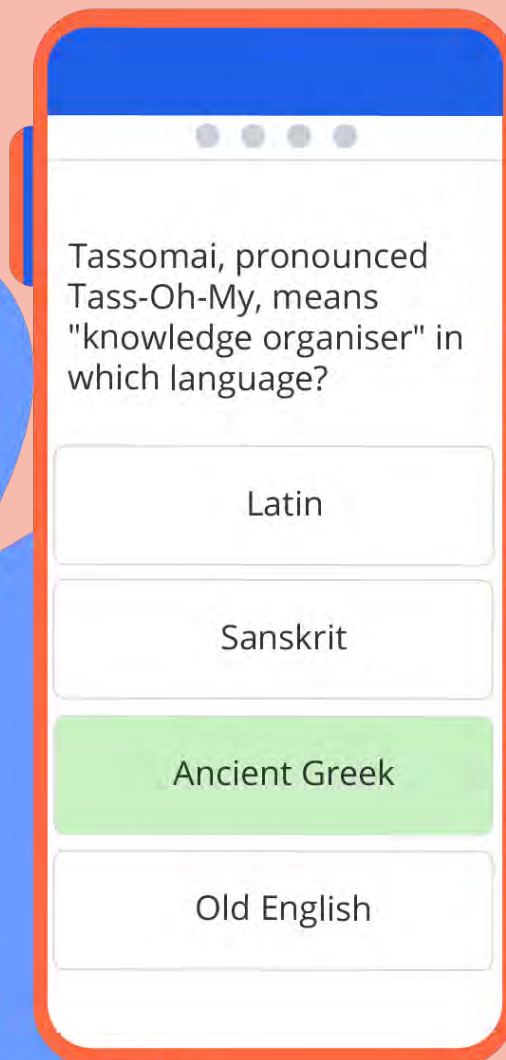

Tips from teachers:

“Be aware of the online resources available to help you. Year 11 goes quickly; students never have as much time as they think. So, ask your school for a list of online resources, make a revision timetable for evenings/weekends, and stick to it.” – Stephen Conlon, Head of KS4 English, Greenford High School

“Access the syllabus and past paper exam materials. Students who are successful know how to answer the questions to maximise their marks; exam technique can change a grade! The understanding of the command words in every subject is important.” – Science teacher

“Engage with your child about their revision and studies early. Learning to recognise what you do and don't know is a skill that many students don't have yet and you can help them to develop this at home.” – Alex Schoedert, Teacher & Head of Year, Wilmington Academy

About Tassomai

About Tassomai

[Tassomai](#) is the award-winning* learning and revision app that's helped 1000s of students get top grades at **GCSE** and in other exams like the **Eleven Plus**.

This quiz-based learning program is designed for children from 7 to 17, with exam-board specific content for maths, English, science and more.

Tassomai's algorithm learns as students use the program, adapting content to reinforce strengths and target any weaknesses with personalised daily retrieval practice activities.

Peace of mind for parents

Parents get weekly progress reports and can log in to check progress using tools like [the Tree](#), a new way to watch knowledge and understanding grow.

"It was worth every penny of the subscription, I cannot recommend this product highly enough."

– Lisa, parent

Trusted by teachers to help students get top marks

Tassomai is used to support the teaching of core subjects in more than 500 secondary schools in England and Wales.

"In our school we found a direct correlation between pupil progress on Tassomai and attainment at GCSE." – Maha Abdelrahman, Head of Science, Fulham Cross Girls' School

Put Tassomai to the test

Families that don't get Tassomai through schools can [sign up as private subscribers](#) and trial the program for **FREE** for 7-days!

Learn more about Tassomai and sign-up online at www.tassomai.com.

You can also contact us on 020 3380 7968 or email enquiries@tassomai.com.
